Document Administrators

The set of people who are authorized to create tasks & publish in QlikView Management Console are called as Document Administrators

Reason: Developers are best placed to understand the Business & the under-lying QlikView Application.

License: It would be applicable with QlikView Publisher License.

How to setup: When Source Folders is configured in Reload Engine, Document Administrators can be added to them. Upon defining, only those document administrators can manage the tasks created for those Apps.

Features:

- Alert Email can be sent to the Document Administrators whenever a task is run.
- They also get the ability to login to QMC
- Apart from Reload tasks everything else would not be accessible to them.

Procedure to create Document Administrator is as follows:

Document Administrators are created in Reload Engine (QDS)
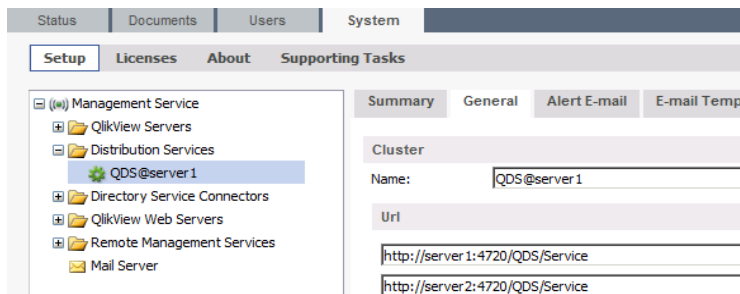

After source folder is updated, Document Administrators can be added just next to it.
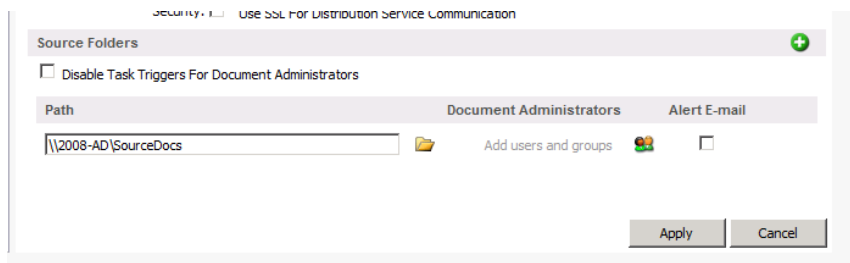

Click on "Add Users and groups", you can add the nominated Document Administrators from the Directory List.

Once the necessary users are added, you could add "Alert Email" so that an email is sent whenever a task (document) from the Source folder is reloaded.
Once the setup is complete in QMC, re-login as Document Administrator (User) from the QMC.

You would see only status & documents tab from QMC
