

Attunity Enterprise Manager Service Pack Release Notes for Version 6.6 SP01 (build 6.6.0.248)

These release notes describe the resolved issues and enhancements included in SP01. All service packs are cumulative, including the fixes and enhancements provided in previous service packs.

SP01 (build 6.6.0.248)

This section describes the resolved issues and enhancements in this service pack.

Resolved Issues

| Component/Process | Description | Internal Issue # | Customer Case # |
|---|---|------------------|-----------------|
| Export Repository | When using the AEM API to export the repository, the following error would sometimes be encountered if the list of tables was very long: <pre>'{"error_code":"DESERIALIZE_TO_TYPE","error_message":"Failed to deserialize json to type ReplicationDefinitionExport: SYS-E-GT, MaxFileSize cannot be greater than 2000.."}'</pre> | AEM-6041 | 1978861 |
| Integration with Compose for Data Lakes | AEM would sometimes erroneously send numerous metadata requests to Compose for Data Lakes at the same time, resulting in 100% CPU consumption on the Compose machine. | AEM-6189 | 1897360 |

| Component/Process | Description | Internal Issue # | Customer Case # |
|-----------------------------|---|------------------|-----------------|
| Metadata Module Deprecation | <p>Qlik places great importance on meeting customer expectations and demands, which is one of the reasons Qlik puts major features through a rigorous customer validation process before approving them for General Availability.</p> <p>Based on customer beta feedback, Qlik has taken the decision not to make the Metadata module generally available in its current form, and is working on providing a better solution in the future.</p> | AEM-6188 | N/A |
