

VERSION MANAGER®

The Versioning Solution for QlikView

- LIFE CYCLE MANAGEMENT
- ROLLBACK
- IMPACT ANALYSIS
- SECURED DEPLOYMENT
- PROCESS & AUDIT TRAIL

VERSION MANAGER SECURES AND STRUCTURES YOUR QLIKVIEW DEPLOYMENTS

As QlikView deployments have rapidly grown over the last few years this growth possesses some new challenges for the development team. **Version Manager** was extended to allow users to secure and improve the efficiency of their QlikView development team.

Version Manager addresses the following challenges

- How do I restore a previous version of a dashboard
- What data element is used in which dashboard
- Who is allowed to deploy new dashboards
- If my data source changes what dashboards are impacted

Version Manager eases and secures the deployment process

With **Version Manager** all deployments are managed through the tool. It is possible at any time to go back to any previous version. Users can no longer update dashboards without the use of **Version Manager**.

Version Manager, a solid solution with a proven track record. **Version Manager** has been available nine years for other BI tools.

Efficient management and versioning of QlikView Projects

- Controlled and secured publication of dashboards to different QlikView Servers (development, test, production,...)
- Immediate publication of previous versions of your QlikView dashboard
- Color-coded comparison of the different versions of your QlikView dashboard
- Archiving of your QlikView dashboards, and of all your project documentation (Interview reports, Functional specifications...) in the **Version Manager** repository
- “Check-in / Check-out” for managing concurrent developments
- Compatible with many formats (SQL scripts, Word, Excel, ...) and other publication methods (FTP, Network directories)
