<sup>1</sup> QlikView is an in-memory analysis technology; memory requirements for QlikView products are directly related to the quantity of data being analyzed.

<sup>2</sup> Third-party security requires QlikView Server Enterprise Edition.

<sup>3</sup> Android browser support requires anonymous access to be enabled on the QlikView Server (requires session or usage call's – not available on a Small Business Edition QlikView server).  
Given the wide variety of Android devices please see QlikCommunity for tested devices and version details.

<sup>4</sup> Recommended for development and testing purposes only.

<sup>5</sup> QlikView Publisher, QlikView web parts for Microsoft SharePoint®, and QlikView Workbench are additional licensed modules of QlikView Server. They are installed by applying a license to a QlikView Server. QlikView web parts for Microsoft SharePoint® and QlikView Workbench require QlikView Server Enterprise Edition.

<sup>6</sup> It is recommended, for optimal performance of a QlikView deployment, that QlikView Server and Publisher reside on separate, dedicated server machines with no other applications running.
