

Automatic PDF-Reporting with QlikView

Companies are forced to make decisions at any time and any place. Many of those decisions are based on simple and intuitive analyses done in QlikView.

Knowing all the latest facts is important for making the right decisions. Delivering those facts to the responsible persons in time and in your format is our issue. You can choose the interval for the automatic PDF deployment – hourly, daily, weekly or monthly – even you can enable the users to "order" a report!

Save time and money using the QV Mailer Service. Developed by Harrer & Partner the QV MAILER is the tool for delivering your reports to your customers (internal or external).

QV MAILER delivers the following advantages:

- Produce automatically QlikView-Reports and PDF's
- ✓ Send PDF-reports to defined persons or groups to a defined time, or put them to a share
- Send to any number of email addresses
- ✓ Individual datasets for receivers
- Actual data for all your internal and external customers

Technical Details:

No need of QlikView Publisher

Simple installer - only database and email settings need to be customized

Backend relies on QlikView server architecture and MS SQL database - with MS SQL Express free version possible

Frontend based on ASP.NET and AJAX

Usage of official QlikView API

System Requirements of QV MAILER:

Operating system at least Windows Server 2008 Database SQL 2005 or 2008; if non-existent, SQL 2008 R2 will be installed Webserver at least IIS 7.0; if non-existent, IIS 7.0 will be installed .NET Framework 4.0; if non-existent, it will be installed MVC-Framework 3.0; if non-existent, it will be installed

Other system requirements:

QlikView Server SMTP Server access data for e-mailing User account with local Admin-rights
