What's new in Qlik Connector 7.0.3 for use with SAP NetWeaver?

Note: All components are recompiled for new releases. It is recommended that you always update both the SAP and Windows systems. There is backward compatibility to the SAP code, so it is possible to install the new release of the connector on Windows without installing the corresponding SAP transports. In that case, however, new functionality and bug fixes that are dependent on changes in the SAP code are not available. New features and bug fixes in Qlik Connector 7.0.3 for use with SAP NetWeaver that are dependent on changes in the SAP code are marked with **(Requires SAP transport update)**. See [below](#) for the current backwards compatibility of the components of the connector package.

SAP transports

Starting from this release the SAP transports are no longer part of the connector installation package. They can be downloaded from the download site as a separate package.

Resolved issues

Qlik Connector 7.0.3 for use with SAP NetWeaver comes with fixes for the issues described below.

BEx Connector

Jira issue ID: SAP-1983

Description: Values of characteristic InfoObjects in BEx queries built on InfoSets can be cut off due to an incorrect value of the field length in the metadata.

(Requires SAP transport update).

Jira issue ID: SAP-1985

Description: Extraction of BEx queries fails with an ABAP dump after upgrading SAP BW to 7.5 Service Pack 14. The same issue can also cause the select dialog in in Qlik to fail.

(Requires SAP transport update).

Extractor Connector

Jira issue ID: SAP-1967

Description: The second row in the textual description of the Extractor or Hierarchy in the select dialog in Qlik Sense is only partly visible.

This document covers the following releases:

Qlik Connector 7.0.3 for use with SAP NetWeaver

Release: November, 2019

InfoProvider Connector

Jira issue ID: SAP-2012

Description: Conditions that are set on Navigational Attributes are ignored in the data extraction if the InfoProvider type is HCPR or FBPA. **(Requires SAP transport update)**

Jira issue ID: SAP-2053

Description: Message server connection jobs failed with an error message: Timeout reached while waiting for clearance of shared buffer. **(Requires SAP transport update)**

Known issues and limitations

The following issues and limitations were identified at release time. The list is not comprehensive; it does however list all known major issues and limitations. We expect to have the issues fixed in future versions.

Changing the field selection in Add Data -> Tables -> Edit this table -> Select data from source does not work in Sense: June 2017 release. The issue is resolved in later releases of Qlik Sense (from June 2017 patch 1). This is valid for all Qlik Sense connectors.

BAPI Connector

In this release QlikView uses the legacy BAPI connector (dll file).

If a BAPI has multiple output, the connector now can handle that in one execution (Qlik Sense). In this release, the feature is available in 'Data load editor'. In 'Add data' the BAPI is executed as many times as the number of outputs selected.

Upgrade notes

Backup recommendations

Version 7.0.3 overwrites any previous version of the Qlik Connector for use with SAP NetWeaver. It is important that you make a backup of the site before upgrading, to be able to recover the site if the upgrade fails.

The following table shows the current backwards compatibility of the components of the connector package.

Connectors	Windows files	SAP transport (data extraction)
SQL connector	7.0.3	6.1.2 or later
BEx connector	7.0.3	6.1.2 or later
SAP Query connector	7.0.3	5.80 SR2 or later
Report connector	7.0.3	5.80 SR2 or later
Extractor connector	7.0.3	5.80 SR2 or later
BAPI connector	7.0.3	5.80 SR2 or later
InfoProvider connector	7.0.3	6.5.0 or later

System requirements notes

Qlik Sense version November 2017 or later is required for the Bex and Extractor connectors.

Qlik Sense version June 2018 or later is required for the SQL, BAPI, and InfoProvider connectors

About Qlik

Qlik is on a mission to create a data-literate world, where everyone can use data to solve their most challenging problems. Only Qlik's end-to-end data management and analytics platform brings together all of an organization's data from any source, enabling people at any skill level to use their curiosity to uncover new insights. Companies use Qlik to see more deeply into customer behavior, reinvent business processes, discover new revenue streams, and balance risk and reward. Qlik does business in more than 100 countries and serves over 48,000 customers around the world.
