# What's new in Qlik Connector 7.0.6 for use with SAP NetWeaver?

---

Note: All components are recompiled for new releases. It is recommended that you always update both the SAP and Windows systems. There is backward compatibility to the SAP code, so it is possible to install the new release of the connector on Windows without installing the corresponding SAP transports. In that case, however, new functionality and bug fixes that are dependent on changes in the SAP code are not available. New features and bug fixes in Qlik Connector 7.0.6 for use with SAP NetWeaver that are dependent on changes in the SAP code are marked with (Requires SAP transport update). See below for the current backwards compatibility of the components of the connector package.

**This document covers the following releases:**

Qlik Connector 7.0.6 for use with SAP NetWeaver

Release: April, 2021

## **BW connector**

The new SAP BW Connector combines and improves the functionality of the SAP BEx and SAP InfoProvider connectors. For more information about the SAP BW Connector, see the online help. It is strongly recommended that you use the BW connector instead of the BEx and InfoProvider connectors when creating new scripts.

## **BAPI connector**

The connector (in Qlik Sense) now supports tables (and tables inside structures) as Export or Import parameters.

## **InfoProvider connector**

A new option to decide if NLS data should be read or not is available. See online help for more information.

The default of the 'DB Aggregation' connection string property is changed to 'true'.

## **Process chain handling**

Improvements in function module /QTQVC/PROCESS\_STATUS. Failed inserts of records in the Qlik database table /QTQVC/STATUS will not occur anymore.

# Resolved issues

---

Qlik Connector 7.0.6 for use with SAP NetWeaver comes with fixes for the issues described below.

## **BEx Connector**

Jira issue ID: SAP-2136

Description: Fiscal year/period key data was showing incorrectly in Qlik Sense and QlikView. The error would occur when a compounded value consisted of different data types. Now we have changed the code so if that happens, the data type CHAR is used for the compounded value to ensure that it is displayed correctly.

**(Requires SAP transport update).**

Jira issue ID: SAP-1985

Description: Only applicable for non-HANA database systems. Extraction of BEx queries failed with an ABAP dump after upgrading SAP BW to 7.5 Service Pack 14. The same issue could also cause the select dialog in Qlik to fail.

**(Requires SAP transport update).**

## InfoProvider Connector

Jira issue ID: SAP-2629

Description: Extraction of data from a CompositeProvider could end prematurely if any of the InfoProviders included in the CompositeProvider returned zero rows of data for the specific selection, resulting in incomplete data in Qlik.

**(Requires SAP transport update).**

## License

Jira issue ID: SAP-2575

Description: Object reference not set to an instance of an object when adding license.

## Report Connector

Jira issue ID: SAP-2070

Description: Mismatch detected. The SAP generated spool file cannot be read.

## SQL Connector

Jira issue ID: QB-3954

Description: SQL connector SNC problem in connector 7.0.4.

## Known issues and limitations

---

The following issues and limitations were identified at release time. The list is not comprehensive; it does however list all known major issues and limitations. We expect to have the issues fixed in future versions.

No issues or limitations.

# Upgrade notes

---

## Backup recommendations

Version 7.0.6 overwrites any previous version of the Qlik Connector for use with SAP NetWeaver. It is important that you make a backup of the site before upgrading, to be able to recover the site if the upgrade fails.

The following table shows the current backwards compatibility of the components of the connector package.

<b>Connectors</b>	<b>Windows files</b>	<b>SAP transport (data extraction)</b>
SQL	7.0.6	6.1.2 or later
BEx	7.0.6	6.1.2 or later
SAP Query	7.0.6	5.80 SR2 or later
Report	7.0.6	5.80 SR2 or later
Extractor	7.0.6	5.80 SR2 or later
BAPI	7.0.6	5.80 SR2 or later
InfoProvider	7.0.6	6.5.0 or later
BW	7.0.6	7.0.6

## System requirements notes

---

Qlik Sense version February 2020 or later is required for the BW connector.

## About Qlik

Qlik is on a mission to create a data-literate world, where everyone can use data to solve their most challenging problems. Only Qlik's end-to-end data management and analytics platform brings together all of an organization's data from any source, enabling people at any skill level to use their curiosity to uncover new insights. Companies use Qlik to see more deeply into customer behavior, reinvent business processes, discover new revenue streams, and balance risk and reward. Qlik does business in more than 100 countries and serves over 48,000 customers around the world.
