Geographic Coverage

The geographic coverage of Qlik GeoAnalytics and the Sense Map chart can be divided in to different parts:

- Base maps – provided base map layers
- Standard Areas and Points – location database for area and point lookups
- Qlik Geocoding – optional package for lookup at address level resolution

Note, additional coverage are added all the time and there is great support for importing areas in Qlik GeoAnalytics.

Base Maps Coverage

- The base maps are based on a number of data sources
- OpenStreetMap data is the major source, used for the small scale features, road networks
- Good coverage in most populated areas
- Regularly updates
