

# How to upload/download files to/from a SharePoint using Microsoft graph APIs?

## SharePoint

SharePoint is a web-based collaborative platform that integrates with Microsoft Office. Launched in 2001, SharePoint is primarily sold as a document management and storage system, but the product is highly configurable and usage varies substantially among organizations.

## Microsoft Graph API

Microsoft Graph is the gateway to data and intelligence in Microsoft 365. It provides a unified programmability model that you can use to access the tremendous amount of data in Microsoft 365, Windows 10, and Enterprise Mobility + Security. Use the wealth of data in Microsoft Graph to build apps for organizations and consumers that interact with millions of users.

Please ref to following link to know more about [Microsoft Graph](https://docs.microsoft.com/en-us/graph/).

## Process

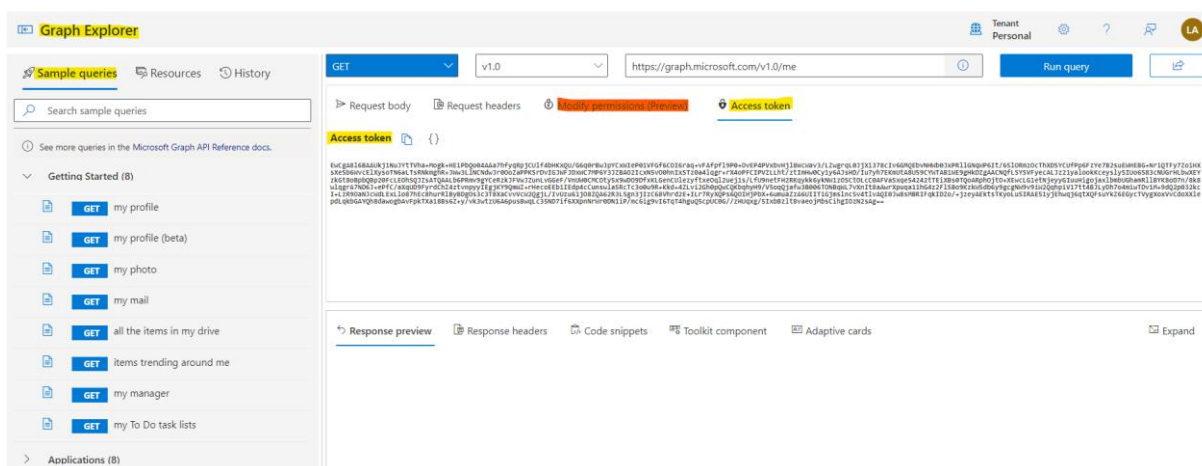

### Pre-requisites

- Need to have Azure App (Client ID and Client Secret)
- Need to have Directory (Tenant ID)
- Need Application Permissions for that App (Files.Read.All, Files.ReadWrite.All, Sites.Read.All...)
- Token URL: "<https://login.microsoftonline.com/{tenantId}/oauth2/token>"
- **Upload: PUT:** "<https://graph.microsoft.com/v1.0/drives/{drive-id}/items/{parent-id}/{filename}/content>"
- **Download: GET:** "<https://graph.microsoft.com/v1.0/drives/{drive-id}/items/{parent-id}/{filename}>"

\*\*\* **For Demo**, the scenario will be to move 4 files from local(D:\test\in) to OneDrive(My files/talend), and then download the file(test04.pdf) from SharePoint to local(D:\test\out)

### NB. For your testing:

If you dont have the Azure App, you can use Graph Explorer to obtain a **temporary token** (valid for one hour) <https://developer.microsoft.com/fr-fr/graph/graph-explorer>
