Google Maps in QlikView in 5 easy steps

VO.85 - October 1st 2008 © Copyright QlikTech International AB 2008 / AES

- 1. Create a blank QlikView file**
.....
- 2. Get some data!**
Make sure the data has [latitude] and [longitude] fields
e.g. Copy the data below

```
Data:
LOAD * INLINE (
Country,Population,GDP,PPP,M,latitude,longitude
Albania,3600523,19621,41.153332,20.168331
Algeria,33858006,269201,28.033886,1.659626
Argentina,40381927,523169,-38.416097,-63.616672
Armenia,3230100,17139,40.069099,45.038189
Australia,21446187,760800,-25.274398,133.776136
Austria,8340924,317800,47.516231,14.550072
Azerbaijan,8629900,64082,40.143105,47.576927
Bahrain,760168,24245,25.930414,50.637772
);
```
- 2. Include the Google Maps script**
Place the code below in your script.....

```
// Google Maps in QlikView
// VO.85.2 - October 1st 2008 © Copyright QlikTech International AB
2008 / AES

// Google Maps Key
// get a key here http://code.google.com/apis/maps/signup.html
gmap_key = "xxx";
max_zoom_level = 5; //maximum value 17

// Variables required for calculating map
// No need to change these
.....
```
- 3. Create chart and map background**
Simply copy and paste the objects below. Please note there are two objects.
A scatter chart and an text box for the image behind.
The easy way: [Press here](#) and then ctrl-c to copy. Now paste into your application
