Logo Branding with QlikView ajax browser user interface

Tested with QlikView 11.0.x

AccessPoint

QlikView		Welcome usbos-pbk\qtadmin Favorites & Profile Last updated Thursday, November 01, 2012 8:52:00 AM
AccessPoint		Showing 101-200 of 235 « Prev 1 2 3 Next » 100 items per page
Category:	Attribute: No Attributes Available	View as:
Image: Strategy and Strateg		

The main AccessPoint screen is driven by **C:\Program Files\QlikView\Web\index.htm**. This file can be modified to include other HTML.

The **QlikView logo** that appears in AccessPoint is referenced in \index.htm as src="images/logo_main.png".

This is a relative reference, and the image is located in **C:\Program Files\QlikView\Web\images**. This image file can be replaced with a different image and the file name retained, or, a different image file can be placed in the \Web\images directory and the new image file referenced in index/htm.

The label **'AccessPoint'** is also defined as an image in index.htm, and the image file located in \Web\images. Similar to the QlikView logo, the AccessPoint logo can be modified and/or replaced as described above.

While working with a QlikView document and selecting the Export or Send to Excel option from the right-click menu on any object, a dialog similar to the picture below will be presented. Note the presence of a QlikView logo.

This logo is located in **C:\Program Files\QlikView\Web\images\logo_main.png**. The dialog box is driven from the following javascript file:

C:\Program Files\QlikView\Server\QlikViewClients\QlikViewAjax\htc\QVAjax.js

This file could be modified and the image file logo_main.png can be changed to a different image file as long as the image is located in C:\Program Files\QlikView\Web\images\logo_main.png. Alternative, the image file name can be retained and the actual image inside the file could be altered. This approach will not require an alteration to the .js file.

This same dialog and image is presented when performing the following actions: Export Save as Excel Lost Connection Timeout (and request to reconnect)

Invite to Collaboration Session

Jan Feb Mar Apr May Jun Jul Aug Sep Oct	If you share your session you can invite other people to collaborate in real time. All participants will be able to view
	this QlikView document. Any selections made by one participant will be visible to everybody.
	ostananı

When a new Collaboration session is initiated in the Guest browser, a dialog appears:

	likView
To join usbos-pbk\qtadmin's session using QVWSamples/QVW - Demo/Sales I Customer Analysis.qvw, simply supply the following information to join as a gue Name: Join Session as a Guest	

This QlikView image is an image file located in: C:\Program Files\QlikView\Web\images\logo_main.png

The image file name is hardcoded in QvResx64_English.dll (or the QvResx64_<language>.dll file appropriate for the given installation.

The only approach to modifying the image in this dialog is to alter the image content in logo_main.png, and retain the file name.

The text in the 'Start Sharing' dialog, the text 'You have been invited to a collaboration session.', is hardcoded in C:\Program Files\QlikView\Server\QvResx64_English.dll (or the QvResx64_<language>.dll file appropriate for the given installation. Currently it is not possible to modify these files.

Browser Title and Icon

The Broswer (Tab) title and associated icon are controlled by C:\Program Files\QlikView\Server\QlikViewClients\QlikViewAjax\opendoc.htm

This file could be modified as follows:

Modify the <title> tag near the top of the file, changing 'Qlikview' to other desired text.

Modify the <link> tag near the top, changing the reference of 'favicon.ico' to some other .ico file in the same directory as 'favicon.ico'. This .ico file must reside in

C:\Program Files\QlikView\Server\QlikViewClients\QlikViewAjax\htc\Images Or

Simply replace favicon.ico with the .ico image of your choice, keeping the filename the same. This will eliminate the need to modify opendoc.htm.

Make sure to recycle Web Service (IIS or QvWS) and QlikView Server after changing any of the above. You may also need to flush client-side browser cache as well.
