Documentation of Allow Session Recovery in version 11

Information
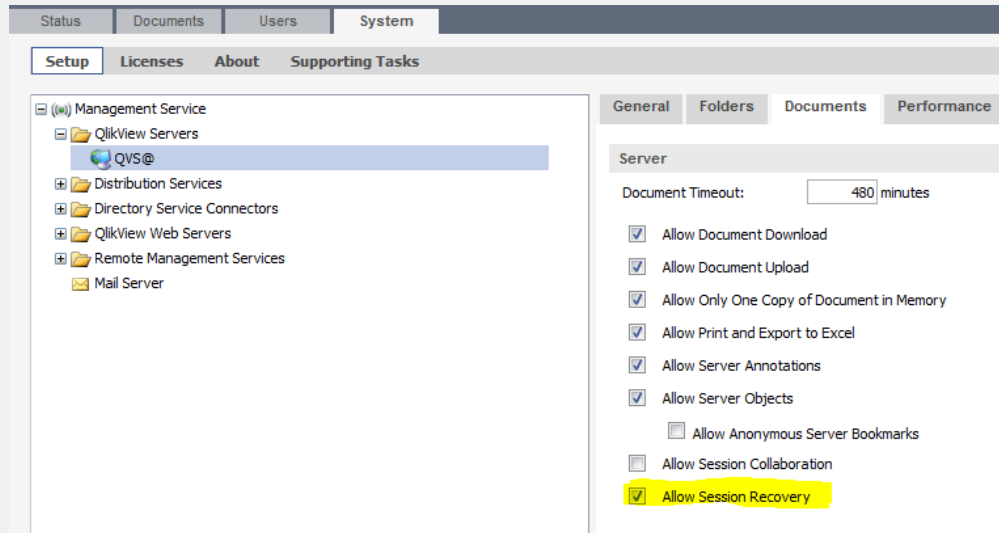

Description   This article describe "Allow Session Recovery" in version 11

Resolution   **Allow Session Recovery**

Session recovery saves the current selection state for each user when a session ends. It then re-applies the selection state the next time that the same user reconnects to the same document.

Note! Session recovery affects all users and documents on a server.

To allow session recovery, tick this check box. To disallow session recovery, untick this check box.
