

# QlikView Enterprise Solutions

HTTPS Configuration on QlikView Webserver  
running without IIS

For

Version : 1.1

Date : March 15, 2016

Author : Firman Khairul

## Table of Contents

Tools Requirement.....	3
SSL-Certificate creation and export using IIS 7 – Windows 2008 R2 .....	3
Bind to SSL using netsh in Windows Server 2008 .....	11

## Tools Requirement

1. SSL key certificate
2. IIS60RKT, IIS 6.0 resource tools kit
3. GUIDGen.exe for generate globally unique identifiers.
4. IIS 7.0 manager
5. MMC certificates

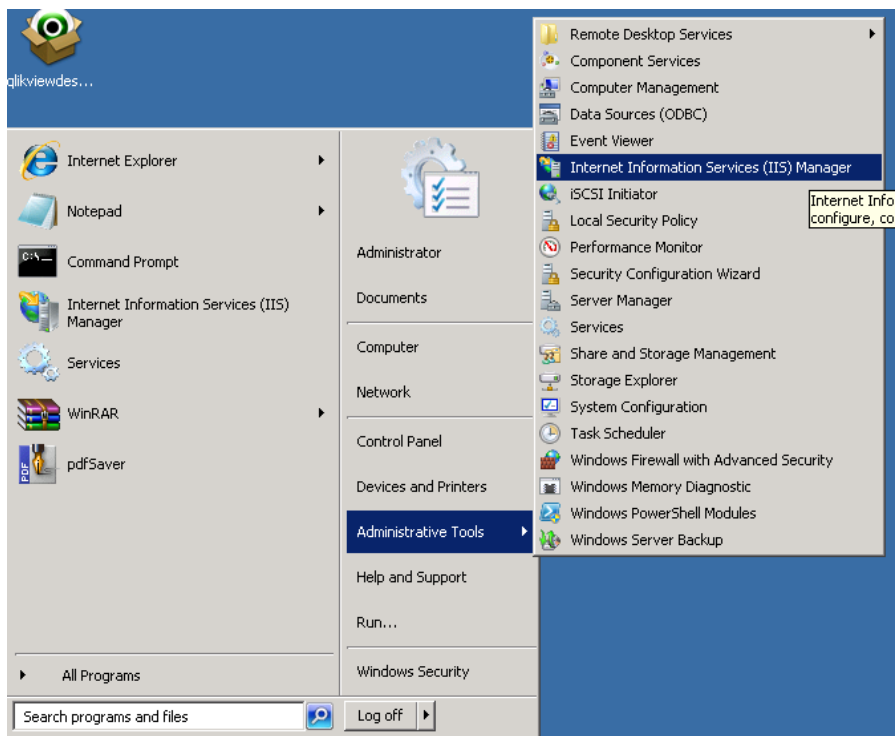

Trial software reference

<http://downloads.collierpickard.co.uk/QlikView/v11.2%20SR6%20Build%2012347/>

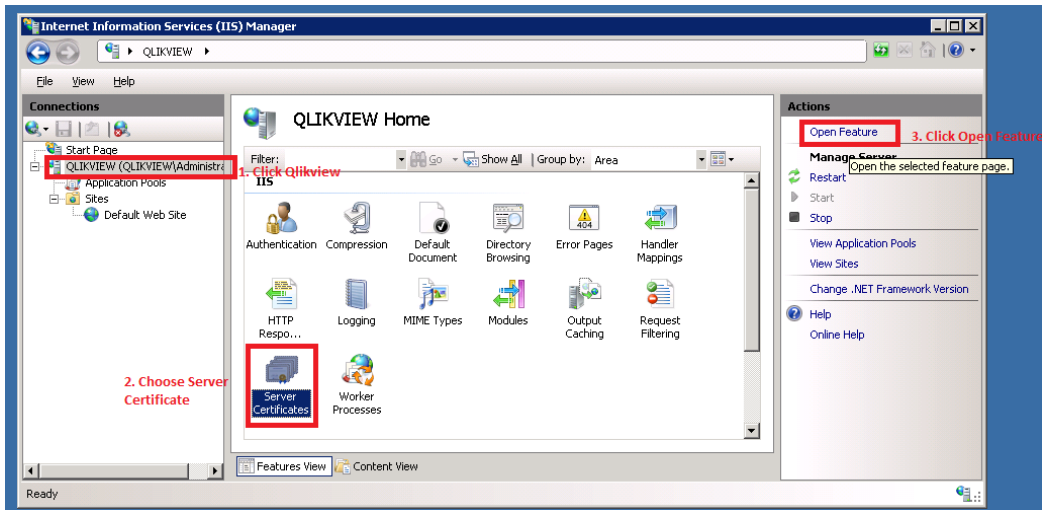

Not for production.

## SSL-Certificate creation and export using IIS 7 – Windows 2008 R2

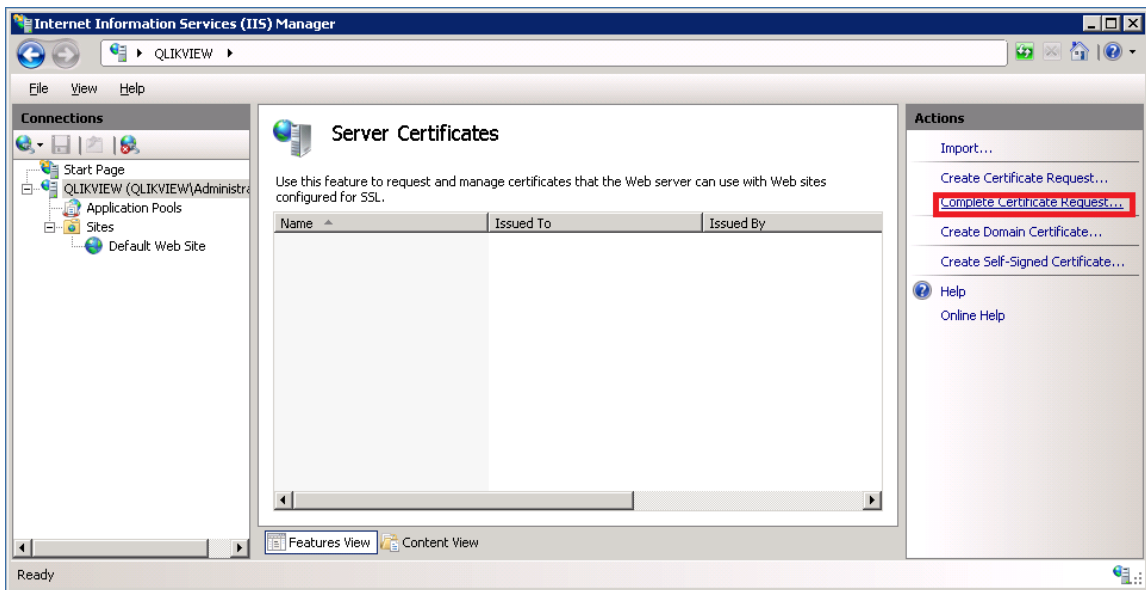

1. Activate IIS manager
2. Open IIS manager from Administrative Tools – Internet Information Services (IIS) Manager

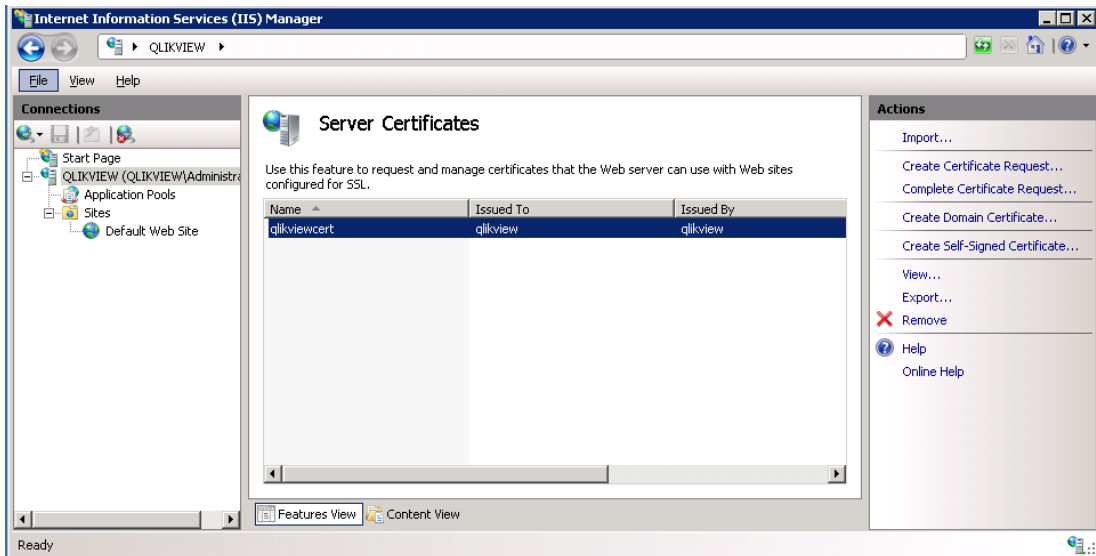

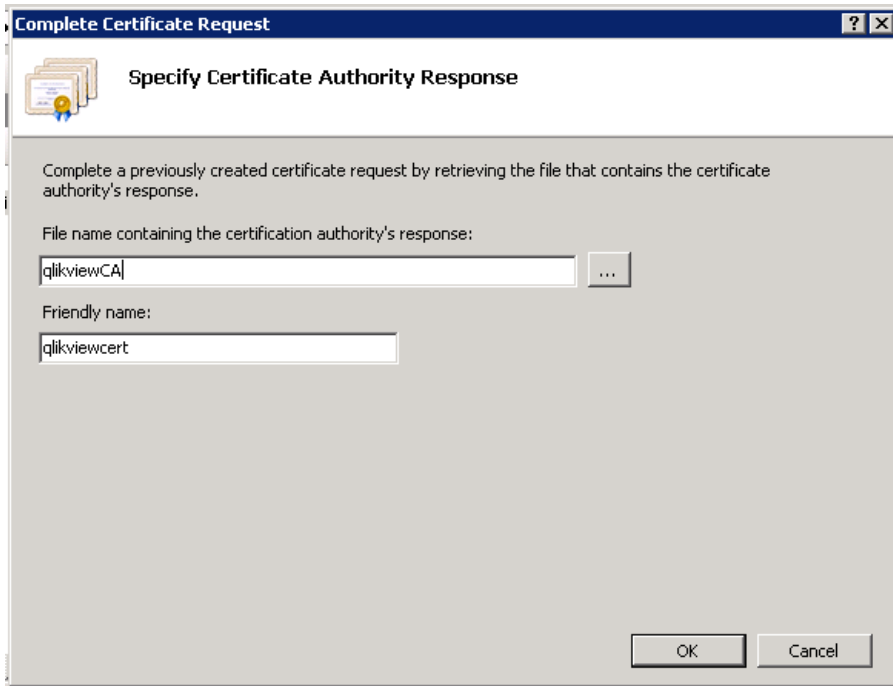

3. Select Computer name – **Qlikview**, choose **Server Certificate**, on right corner click **Open Feature**

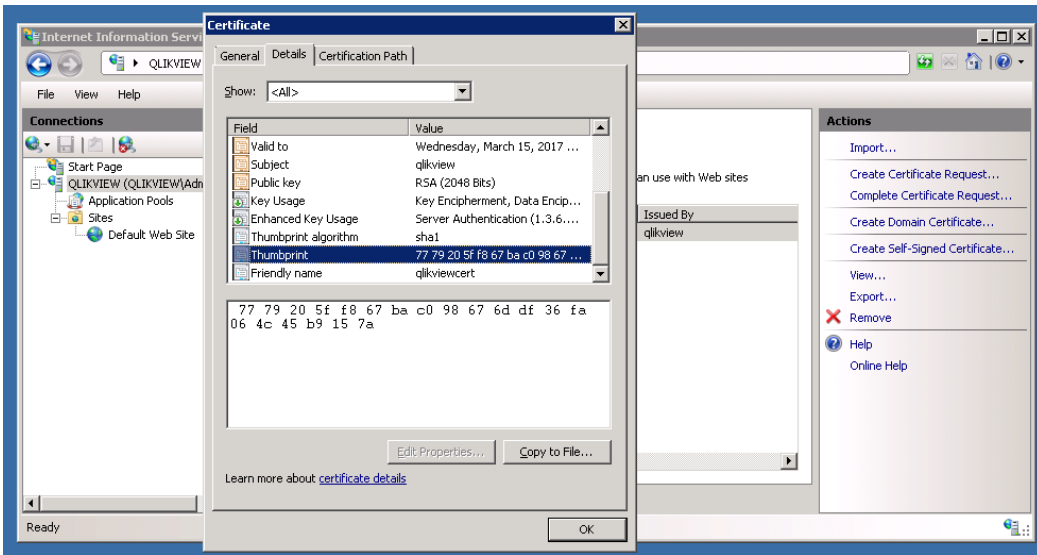

4. Select Computer name – **Qlikview**, choose **Server Certificate**, on right corner click **Complete Certificate Request ...**

Choose comodo certificate and type the friendly name (example: qlikviewcert)

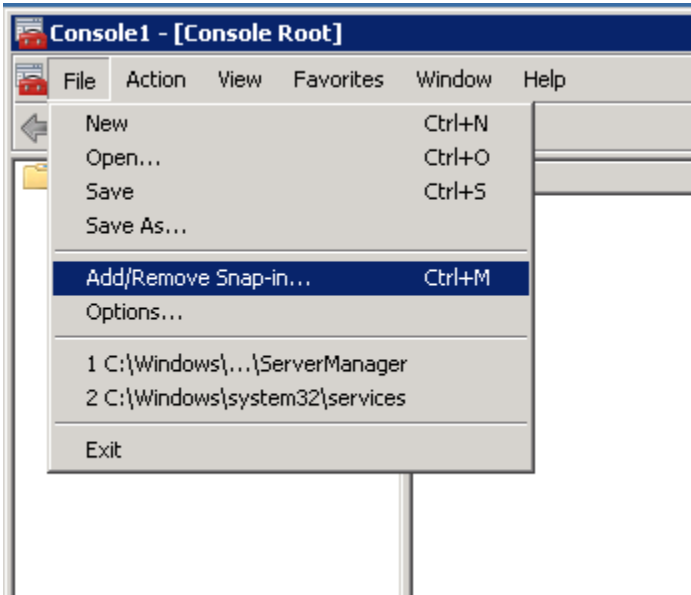

Write down hash for certificate.

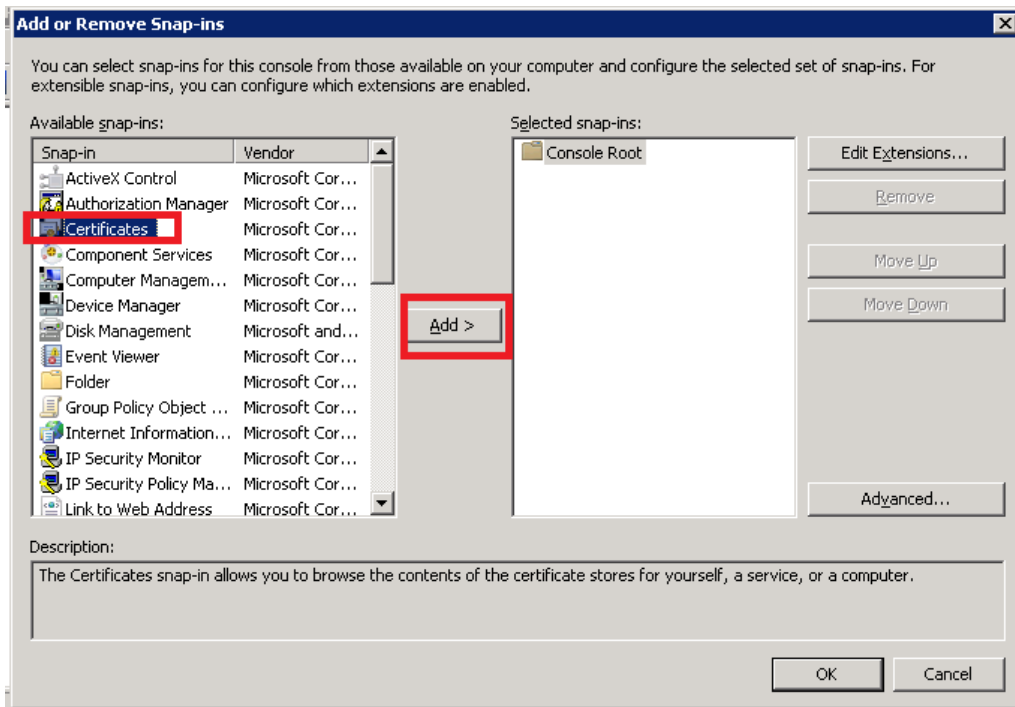

Example : 77 79 20 5f f8 67 ba c0 98 67 6d df 36 fa 06 4c 45 b9 15 7a

5. Open Certificate manager.  
Click Start Windows – Run – type MMC, press Enter

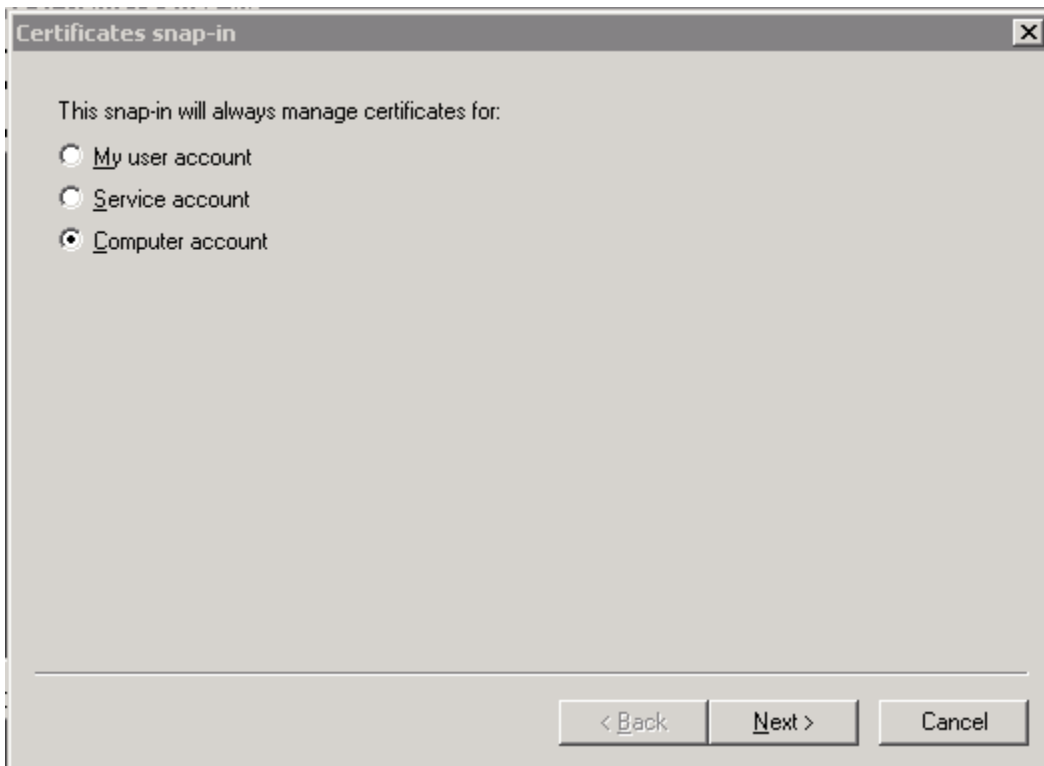

To add Certificate manager, click File – Add/Remove Snap-In

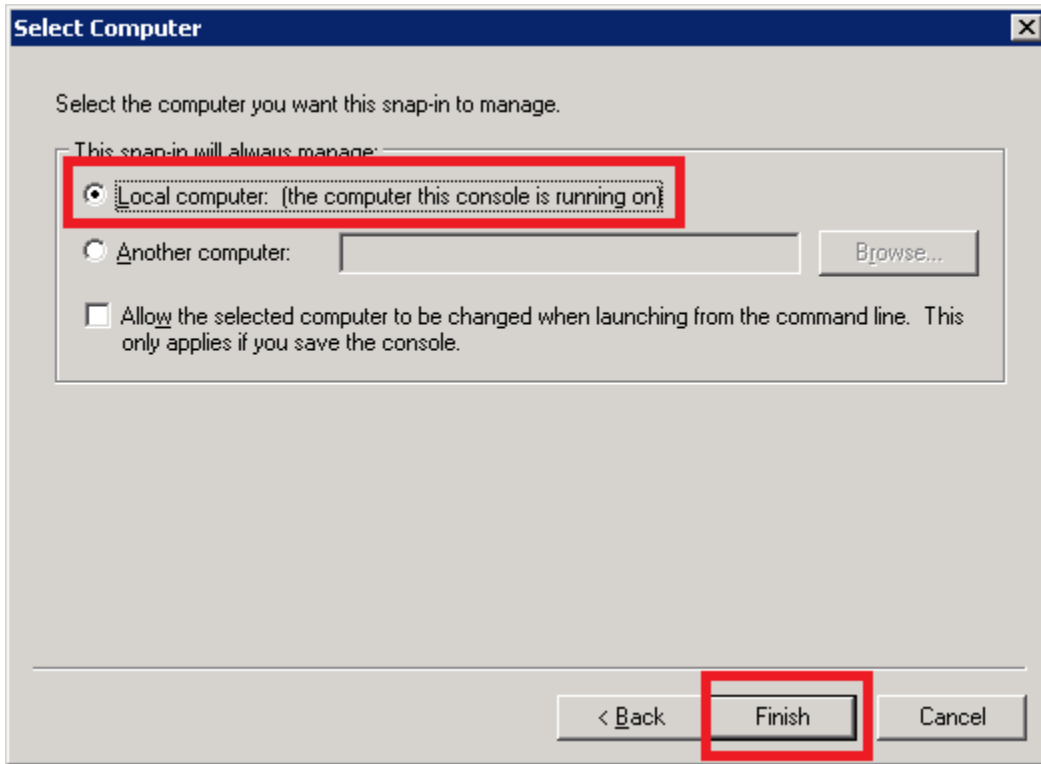

Choose **Certificate** and Click **Add >**

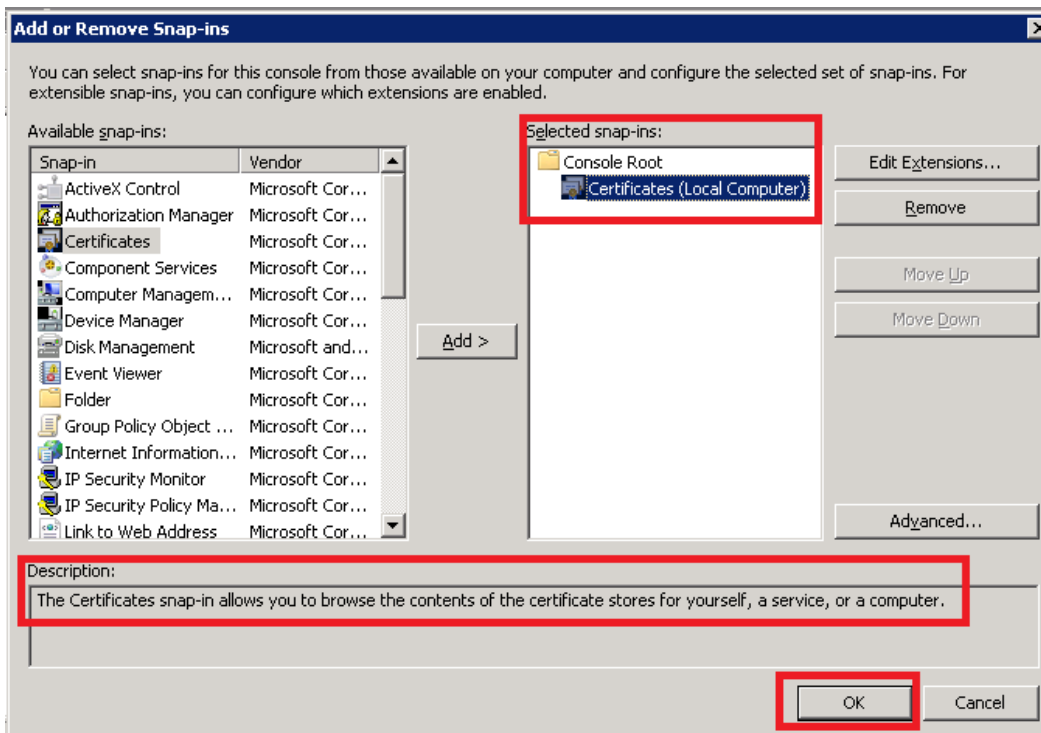

Choose **Computer account** and then press **Next >**

Select **Local computer**, and press **Finish**

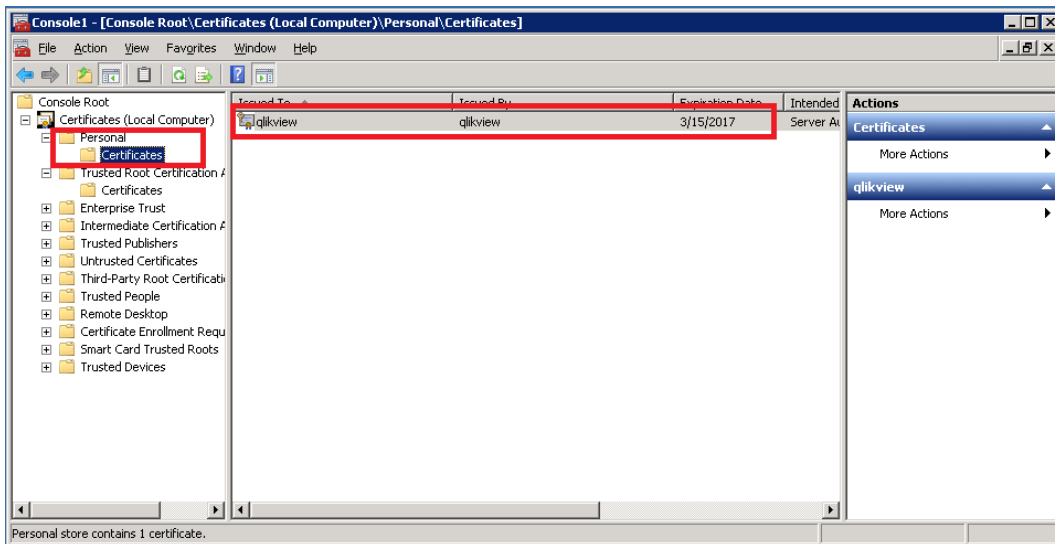

Ensure **Certificate (Local Computer)** on right cell and the click **OK**

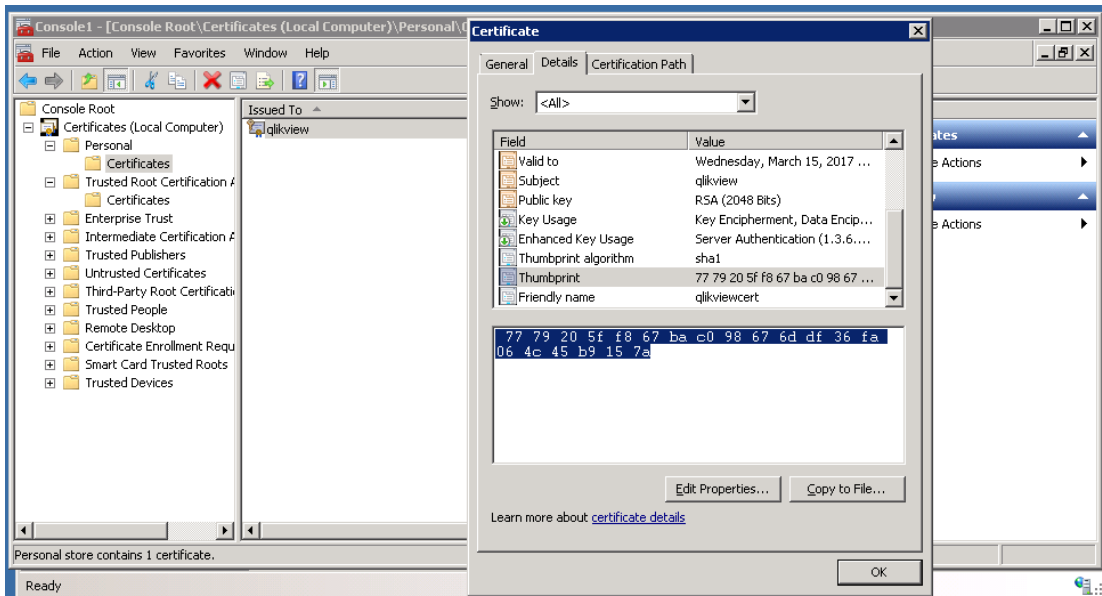

6. Select **Certificate** under **Personal**, Ensure the certificate already exist.

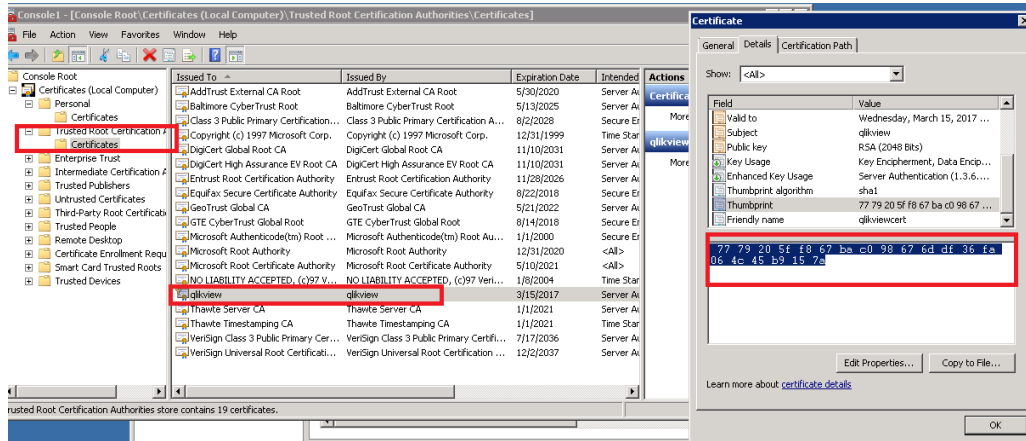

Ensure the hash key same.

Example: 77 79 20 5f f8 67 ba c0 98 67 6d df 36 fa 06 4c 45 b9 15 7a

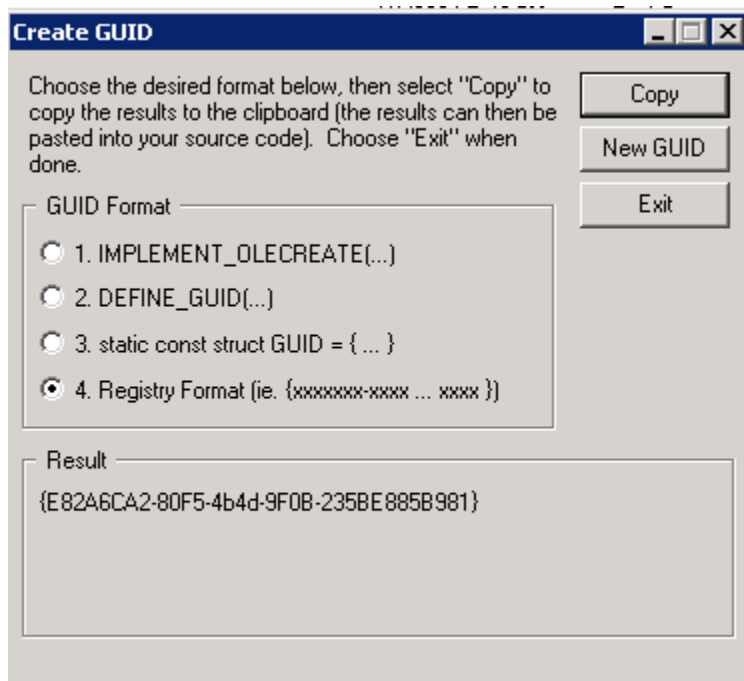

7. Check on **Certificate** under **Trusted Root Certification Authorities**, certificate is exactly same with personal.

8. Generating a GUID

Example : {E82A6CA2-80F5-4b4d-9F0B-235BE885B981}

Note the hash key from certificate key (delete the space)

7779205ff867bac098676ddf36fa064c45b9157a

GUID key :

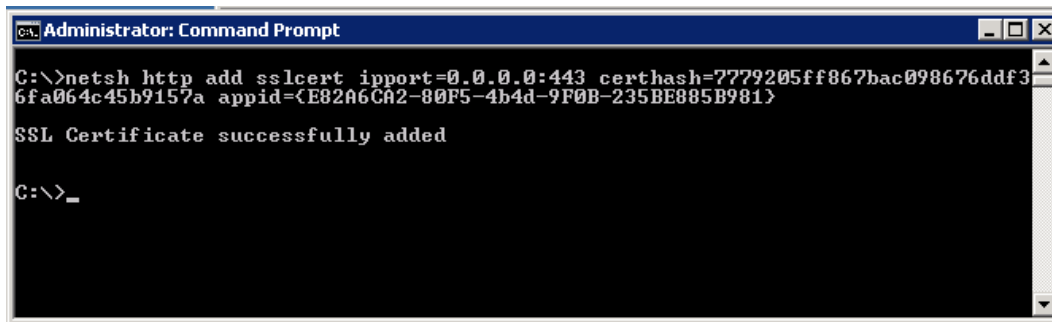

{E82A6CA2-80F5-4b4d-9F0B-235BE885B981}

## Bind to SSL using netsh in Windows Server 2008

1. In Windows Server 2008, use **Netsh** instead of **httpcfg**, as shown in the following example:

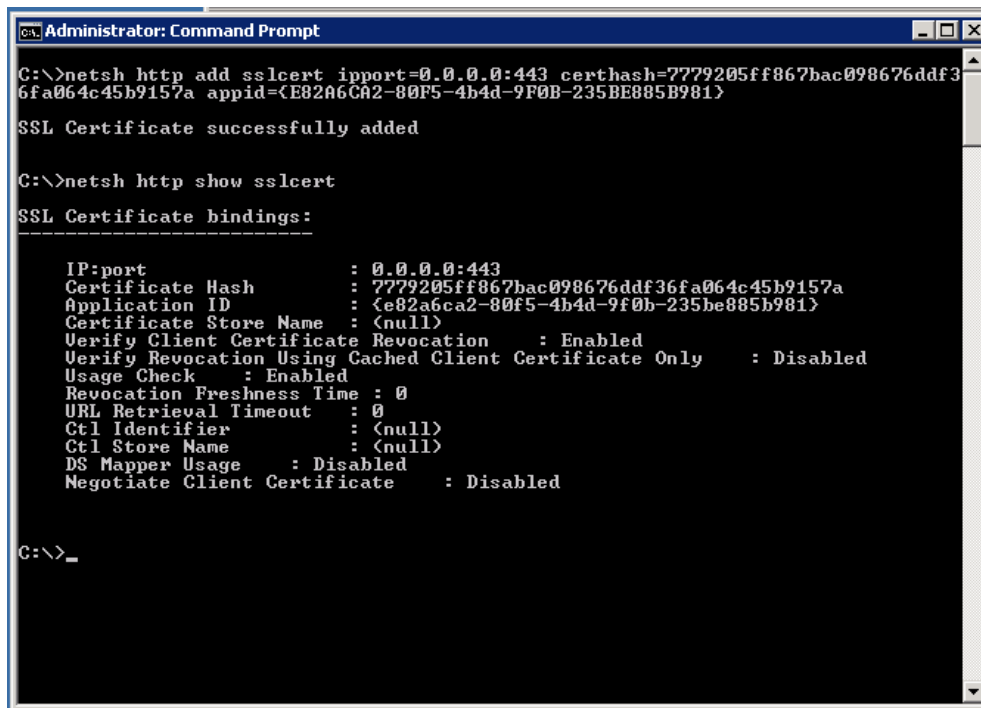

```
netsh http add sslcert ipport=0.0.0.0:443
certhash=000000000003ed9cd0c315bbb6dc1c08da5e6 appid={00112233-4455-6677-
8899-AABBCCDDEEFF}
```

- The **certhash** parameter specifies the thumbprint of the certificate.
- The **ipport** parameter specifies the IP address and port, and functions just like the **-i** switch of the **Httpcfg.exe** tool described.
- The **appid** parameter is a GUID that can be used to identify the owning application.

```
Administrator: Command Prompt
C:\>netsh http add sslcert ipport=0.0.0.0:443 certhash=7779205ff867bac098676ddf3
6fa064c45b9157a appid={E82A6CA2-80F5-4b4d-9F0B-235BE885B981}
SSL Certificate successfully added
C:\>_
```

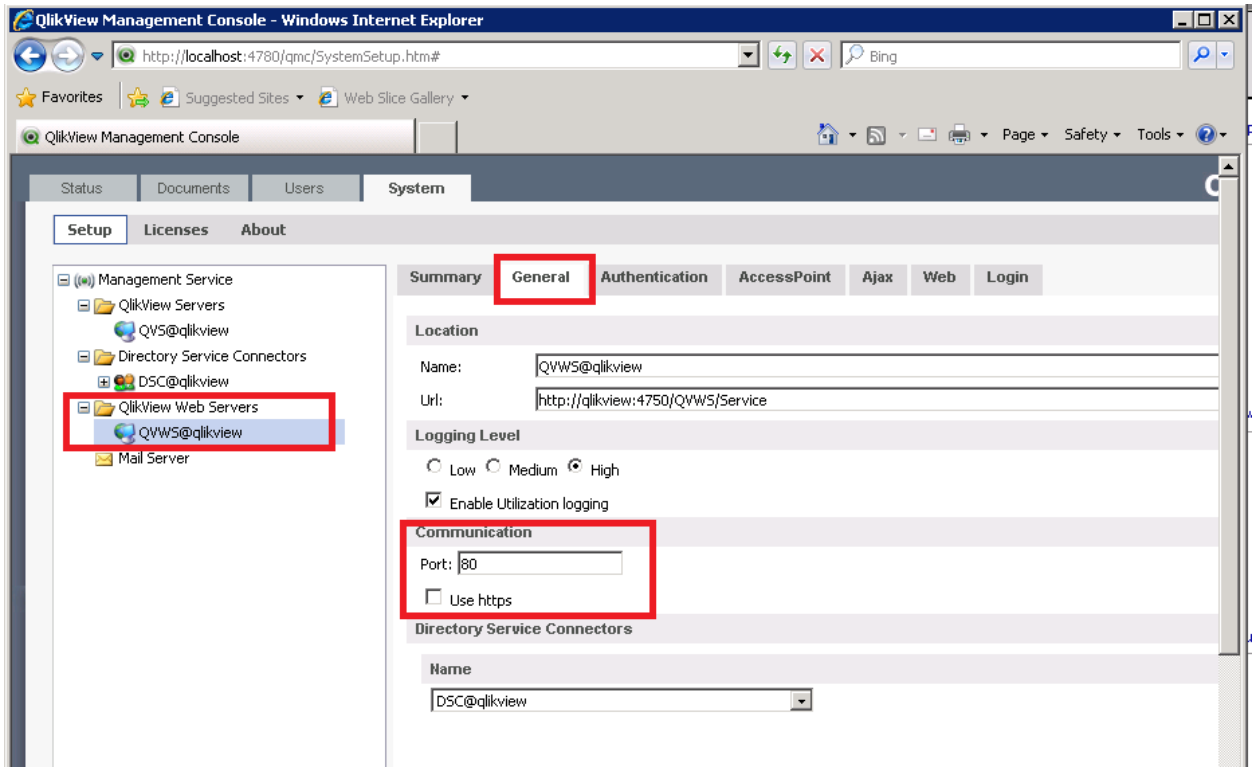

2. To verify the registration of the certificate, use **netsh http show sslcert**

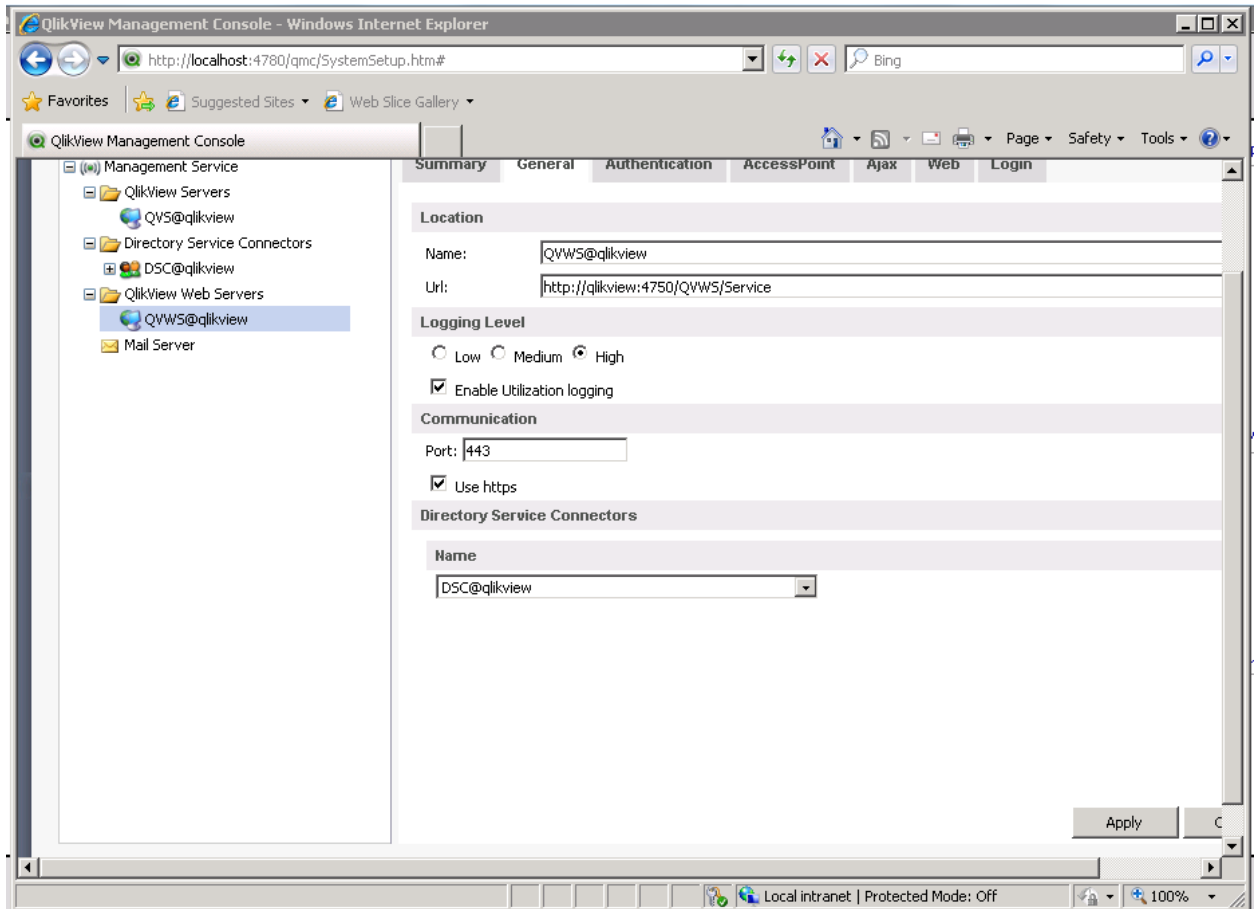

```
Administrator: Command Prompt
C:\>netsh http add sslcert ipport=0.0.0.0:443 certhash=7779205ff867bac098676ddf3
6fa064c45b9157a appid={E82A6CA2-80F5-4b4d-9F0B-235BE885B981}
SSL Certificate successfully added
C:\>netsh http show sslcert
SSL Certificate bindings:
-----
IP:port           : 0.0.0.0:443
Certificate Hash  : 7779205ff867bac098676ddf36fa064c45b9157a
Application ID   : {e82a6ca2-80f5-4b4d-9f0b-235be885b981}
Certificate Store Name : <null>
Verify Client Certificate Revocation : Enabled
Verify Revocation Using Cached Client Certificate Only : Disabled
Usage Check      : Enabled
Revocation Freshness Time : 0
URL Retrieval Timeout : 0
Ctl Identifier    : <null>
Ctl Store Name   : <null>
DS Mapper Usage  : Disabled
Negotiate Client Certificate : Disabled
C:\>_
```

## Configure https through QlikView Management Console

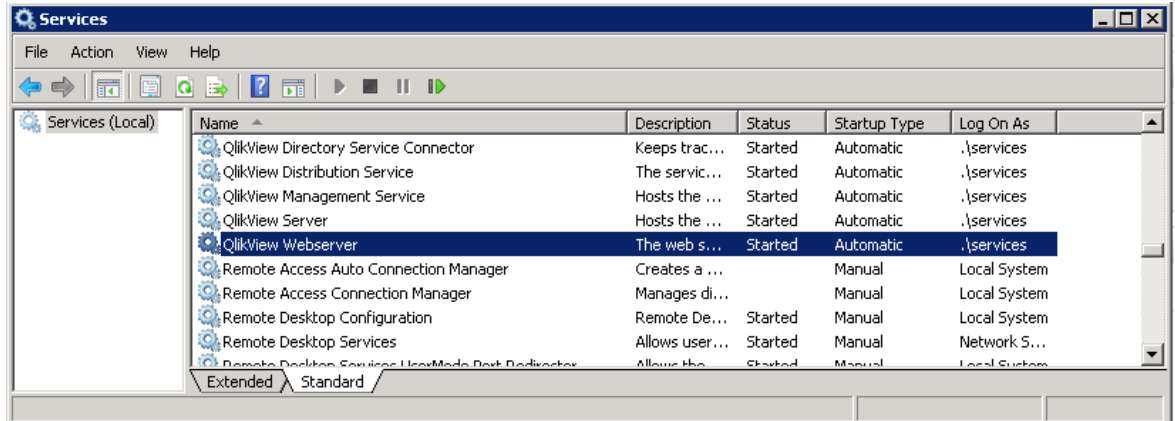

1. Open **QVMC**
2. Select **QlikView Web Server**
3. Choose **General**

4. On **Communication Port**, type **443** (standard port for https) and check **Use https**.

5. Ensure all services in **started**.

6. Trying browsing using https instead of http.
