

Hi everyone,

I have a problem with the "build job" in the version 6. I have seen a lot of topic about this subject, I tried to change the JDK/JRE in Window-> Preference->Java->Install JREs, but nothing works. For information, I have currently jdk1.8.0\_73 (Default).

When I run my job, it works perfectly.

It's rather urgent and I have no idea to fix this problem, despite the number of the topic created for this subject...

I paste the code which is produced in my log file : (I understood nothing...)

If someone have an idea.....
