

Hello,

i have 2 usercomponents, using the same Module cobol2j.jar which is a bugfixed and extended Version of cobol2j.1.5.3

One component we developed on our own, immideadly using the new jar file:

```
<IMPORTS>
<IMPORT NAME="cobol2j" MODULE="cobol2j.jar" REQUIRED="true" />
<IMPORT NAME="IMSFileAidFormat" MODULE="IMSFileAidFormat.jar" REQUIRED="true" />
<IMPORT NAME="commons-lang" MODULE="commons-lang-2.4.jar" REQUIRED="true" />
<IMPORT NAME="commons-logging" MODULE="commons-logging-1.1.1.jar" REQUIRED="true" />
<IMPORT NAME="guava" MODULE="guava-19.0.jar" REQUIRED="true" />
</IMPORTS>
```

This component work perfektly finding the jar, which is in the componentfolder and also automaticly deployed to <talendbase>\lib\java

The second component is derived from tFileInputEBCDIC, which used cobol2j.1.5.3 and some other older jars

So i updated the XML as follows:

```
<CODEGENERATION>
<IMPORTS>
<IMPORT NAME="Talend File Enhanced" MODULE="talend_file_enhanced_20070724.jar" REQUIRED="true" />
<IMPORT NAME="cobol2j" MODULE="cobol2.jar" REQUIRED="true" />
<IMPORT NAME="cb2xml" MODULE="cb2xml.jar" REQUIRED="true" />
<IMPORT NAME="JAXB-api" MODULE="jaxb-api-2.2.jar" REQUIRED="true" />
<IMPORT NAME="JAXB-impl" MODULE="jaxb-impl-2.1.8.jar" REQUIRED="true" />
<IMPORT NAME="jsr173" MODULE="jsr173_1.0_api.jar" REQUIRED="true" />
<IMPORT NAME="commons-lang" MODULE="commons-lang-2.6.jar" REQUIRED="true" />
<IMPORT NAME="commons-logging" MODULE="commons-logging-1.2.jar" REQUIRED="true" />
</IMPORTS>
</CODEGENERATION>
```

This component has also all the necessary jars in the component Folder, but when pulling the component to a Job ist shows cobol2j.jar is missing.

The modul window shows as this:

when switching to code window the error appears and an Import Assistent::

I click Import and choose the libray from the Position in the userrepository.

Then i close the dialog. When i do this the first time, nothing happens.

But every next try shows then:

which are all jars specified in the component xml, but all are in place (component dir and Java/lib folder) !!!

We are using :

Any hint/help appreciated

dj
