

Good Morning Community (South Australia time!)

I am investigating the use of TOS as THE integration middleware for use by our Payroll Services Company. We have a number of clients who are implementing Workday and who have expressed an interest in integrating data into our Payroll Engine. This information includes such information as new hires, personal detail changes, basically anything that affects an employees payment.

The approach we are considering will take the Workday PICO (or PEI) File and map it into the import format we require before passing this mapped data to our API to be imported/validated within our Payroll Environment.

My question is - has anyone done a mapping exercise on the Workday PICO/PEI files to do a similar sort of process? I attempted to use the tXML components but have to admit that the sheer size and complexity of the PEI Sample File was pretty intimidating, especially to a TOS Newbie!

An excerpt of the sample PEI File I was using is shown below:

```

</peci:Worker>

In my (brief) time with TOS I've managed to read the entire PECI file in and have managed to extract the Summary Schema, but it's the 'Worker' schema and related sub-assemblies that are causing me issues.

Has anyone in the community had had any more success with this than me? Would really appreciate some tips and/or pointers?

Thanks & Best Regards to All!
