My job looks like:

tFileInputJSON > tFileOutputDelimited

I can get all the data for all the fields from the first JSON object fine, but I **can't seem to make it loop through all the objects** in the JSON file to get more than a single row of output.

I am trying to get all the data out for the **device**. In the fFileInputJSON, the Loop Json query is "**$.device**"

Here is a sample from the file:

{"xxxx":"000xxx00-0x0x-0x0x-xxx0-0x000x000000","xxxxxxxxxxxxxx":0,"xxx":{"xxxxxxx":"0.0.00.00000"},"xxxx":[],"**device**
