

Hi there. I have a similar issue and it maybe because the job runs with several components logging into Salesforce. However the errors change. These were from a test phase and I eventually left it running from my Windos 2008 server but ideally it needs to be on the clients Linux server as a Cron job. It runs fine from Windows just not from Linux.

There are 4 errors below in order I received them. I ran once a week.

I'd be grateful for any thoughts.

Subject: Cron <root@server> sh /var/tmp/ETL/RWHACRONFILE_0.1/RWHACRONFILE/RWHACRONFILE_run.sh

Exception in component tSalesforceInput_5
