

Hello Sabrina,

What you mean with "only on Window server?" I am running Talend in a windows machine... i don't have any other OS available....

"Have you tried JDK 1.8 instead of JRE?"

as far as I have set up everything in windows, I believe I am using JDK 1.8 not JRE, although it is true when the error is display it says:

"E:/jdk1.8.0_212/jre/bin/java.exe" is that what you mean? How can I change that? my windows environment variables are:

users variables

JAVA_HOME:E:\jdk1.8.0_212

path:E:\jdk1.8.0_212\bin

System variables:

JAVA_HOME:E:\jdk1.8.0_212

path:E:\jdk1.8.0_212\bin

also I have added the following line into TOS_DI-win-x86_64.ini

-vm E:\jdk1.8.0_212\bin

I could't found any other place within Talend were set up java version.

I have set up tRunJob_1 to print the parameters and this is what i get: (I am running the process from a parent job):

Starting job PassiveData_Parent_Job at 14:31 31/05/2019.

Null value will be used for context parameter CurrentDate: Unparseable date: "01/01/2016"

[statistics] connecting to socket on port 3506

[statistics] connected

Null value will be used for context parameter PassiveData_App_Client_Status_Header: For input string: ""

tRunJob_1 in PassiveData_Data_Load call PassiveData_Import_AppAccessibilitySession with:

```
[E:/jdk1.8.0_212/jre/bin/java.exe, -Xms256M, -Xmx1024M, -Dfile.encoding=UTF-8, -cp,

[statistics] disconnected

Job PassiveData_Parent_Job ended at 14:31 31/05/2019. [exit code=1]

this is how the child job (the one is failing) looks like:

in tJava_2 I set up the context for every file type is going to be treated. there is 31 file types:

example:

```
context.PassiveData_ClientInfo_File = ((String)globalMap.get("row7.Zip_File_Full_Path")) + ((String)globalMap.get("row7.Data_File_Name"));
```

an TRunJob_1 configuration is:

tRunJob_1

Schema: Built-In Edit schema Copy Child Job Schema

Advanced settings: Use dynamic job Context job: context.JobName*

Dynamic settings: Job: PassiveData_Import_App_Currently_Installed;PassiveData_Import Version: 0.1*

View: Context: "OnPremiseTesting"*

Documentation: Die on child error Transmit whole context

Context Param	Parameters	Values
---------------	------------	--------

any idea?

Thanks,
