

Right, thanks. It didn't think of looking in the filesystem.

OK. So, the errors are on validation of the document. first error is about the "Equivalent scale Denominator" (name in geonetwork's interface) not filled.

I get an error "Exception in endElement: cvc-datatype-valid.1.2.1: " is not a valid value for 'integer'."

Looks like the problem is that some compulsory informations are missing, so it fails to pass the validation.

Here is the XML file generated by SDI (that is, in fact, almost empty except from the geographical bounding box)

```
