

Hello,

Before building your Job, could you please go to Window > Preferences, select Talend > Import/Export, and then select the Add classpath jar in exported jobs check box to wrap the Jars in a *classpath.jar* file added to the built Job?

Let us know if it is OK with you. And did you select "Java source" check box on the "Build job " window to export the .java file holding Java classes generated by the Job when designing it?

Best regards

Sabrina
