

hello,

I am trying to call a webservice from TOS5.3 using tSoap. I setup tSoap correctly and I was able to send soap message but when i send soap message body greater than 45000 lines then it generate exception.

my Talend job is similar to above one but authentication failure is already solved

My problem is that I am getting Caused by: java.io.IOException: Error writing to server whenever I run this job.

I hope someone can help me on this as I'm finding it hard to google for anything related to this topic. The resources that I found are not helpful.

code

connecting to socket on port 3477

connected
